EDUCATION

University of Ottawa

Ottawa, ON

Honours Bachelor of Science in Computer Science (Co-op) - GPA: 3.75

Expected 2028

- **Awards:** Dean's Honour List, Entrance Scholarship for students with 90%+ average
- **Relevant Courses:** Introduction to Computing I/II, Digital Systems, Computer Architecture, Data Structures & Algorithms

SKILLS

Languages: HTML/CSS, SQL, C/C++, Python, JavaScript/TypeScript, Java

Frameworks & Libraries: React, Express, PostgreSQL, PyTest, PyTorch, scikit-learn, pandas, NumPy, Matplotlib, Seaborn, requests

Developer Tools: Git, Linux, Wireshark, Nginx, Docker, Podman, Jenkins

EXPERIENCE

Student – DevOps

May 2025 – Aug. 2025

FINTRAC — Docker, Podman, Jenkins, Kubernetes, Azure DevOps

Ottawa, ON

- Supported automation and reliability of **CI/CD pipelines** in **Jenkins**, streamlining deployments and ensuring consistent artifact delivery across distributed systems.
- Automated **Jenkins plugin management** by developing a **Bash script** to synchronize plugins across container updates, reducing manual effort and improving consistency.
- Used **Docker and Podman** for containerized development and deployment workflows.

IT Technician CO-OP

Feb. 2024 – Aug. 2024

Curtiss-Wright — Bash, Python, Active Directory

Ottawa, ON

- Automated large-scale **OS deployment** using **PXE Boot**, accelerating migration of **50% of enterprise devices** and reducing manual reimaging effort.
- Administered and secured **300+ employee accounts and devices** through **Active Directory**, ensuring reliable authentication and access control across the enterprise.
- Assisted in fully restoring operational systems to **100% functionality** after global **CrowdStrike outage**.

PROJECTS

Network Traffic Simulator with Management & Telemetry (Raspberry Pi) | C++

- Developed a **C++ traffic engine** using **raw sockets** to generate **TCP/UDP/ICMP** packets with configurable patterns (**constant rate, bursty, Poisson**).
- Implemented a **management interface** including a custom **CLI** and lightweight **REST/gRPC service** for configuring traffic flows and reading state.
- Engineered a **telemetry system** to track **throughput, latency, and packet loss** in real time.

uostats.com | React, Tailwind, TypeScript, PostgreSQL (Supabase), Express

- Built a full-stack platform with **React, TypeScript, Express, and PostgreSQL (Supabase)** to let uOttawa students share and explore co-op placement insights.
- Implemented secure user authentication with **SMTP email verification**.
- Deployed the application on a Linux-based **DigitalOcean VPS with Nginx**.

Machine Learning-Based Network Anomaly Detection System | Python, scikit-learn, matplotlib, Seaborn

- Built a **machine learning anomaly detection engine** to identify abnormal **network traffic patterns** with **87% accuracy**, demonstrating applications in **DDoS detection**.
- Preprocessed traffic features (**null handling, winsorization, normalization**) to improve stability and reduce false positives.
- Validated model performance with cross-validation and metrics (**precision, recall, F1-score, Confusion Matrix**) for robust generalization.
